

# MRP

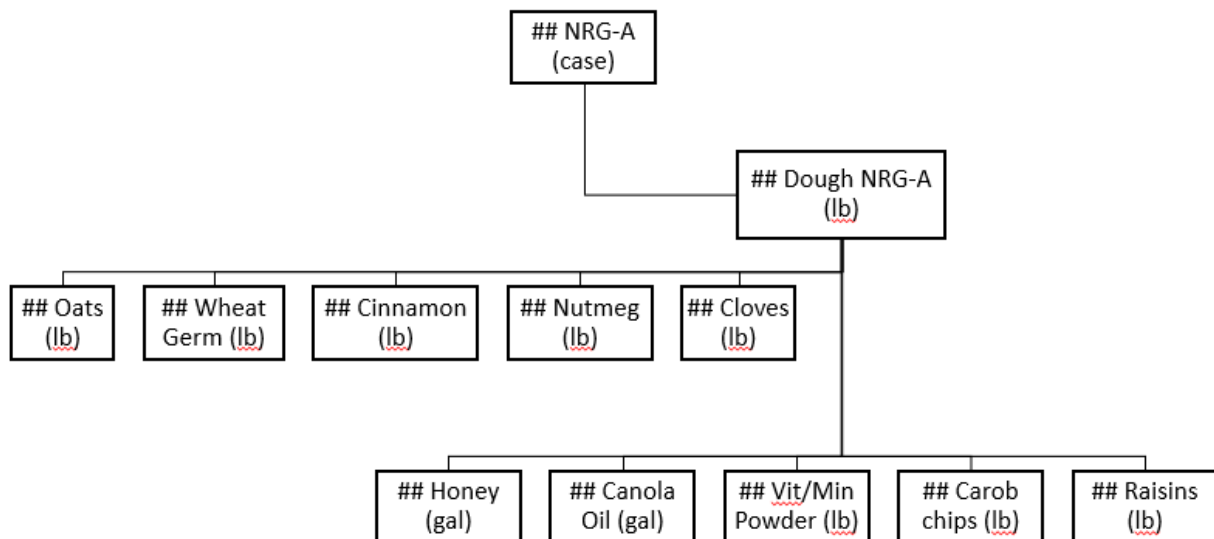

## Exercise Introduction

Material resource planning is intended for 3 objectives:

- Ensure materials are available for production and products are available for delivery to customers.
- Maintain the lowest possible material and product levels in store to achieve LEAN processes.
- Plan manufacturing activities, delivery schedules and purchasing activities.

## Bill of Material (BOM)

A critical input to the MRP process is the bill of material (BOM), which shows how components and semi-finished products are combined to produce the final product. A graphical representation of the BOM for the NRG-A bar is shown below:

The raw materials (Oats, Wheat Germ, etc.) are combined in a mixer to produce a 500 lb. batch of dough. The dough is then transferred to the baking line, where it is formed into bars, baked and packaged. For simplicity, we have ignored the wrappers, boxes and cases that are needed to produce a complete case of Fitter Snacker bars.

To view the BOMs for Fitter Snacker, follow the menu path:

**Logistics > Production > Master Data > Bills of Material > Reporting > BOM Explosion > Material BOM > Multilevel BOM**

# MRP

Material BOM Edit Goto Extras Settings Environment System Help

**Explode BOM: Multi-Level BOM: Initial Screen**

Material: 00F100  
 Plant: 00PT  
 Alternative BOM: ☐  
 BOM Application: PP01

Selection  
 Valid From: 07/31/2008  
 Change Number:   
 Required qty:

Enter ##F100 for Material, ##PT for Plant and PP01 for BOM Application, then click on the execute (⏎) icon

Material BOM Edit Goto Extras Settings Environment System Help

**Display Multilevel BOM**

Material: 00F100  
 Plant/Usage/Alt: 00PT / 1 / 01  
 Description: 00 NRG-A  
 Base Qty (CS): 7.000  
 Reqd Qty (CS): 7

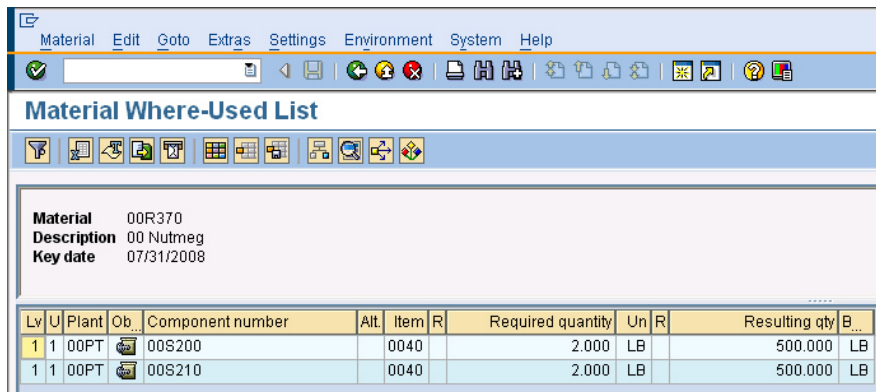

Level no.	Item	Qty	Component	Description	Unit	Reqd Qty	Unit	Unit
..1	0010		00S200					
..2	0010		00R380					
..2	0020		00R420	00 Wheat Germ		50	LB	L
..2	0030		00R320	00 Cinnamon		5	LB	L
..2	0040		00R370	00 Nutmeg		2	LB	L
..2	0050		00R330	00 Cloves		1	LB	L
..2	0060		00R360	00 Honey		10	GAL	L
..2	0070		00R300	00 Canola		7	GAL	L
..2	0080		00R410	00 Vit/Min Powder		5	LB	L
..2	0090		00R310	00 Carob Chips		50	LB	L
..2	0100		00R400	00 Raisins		50	LB	L

This screen shows 7 cases of snack bars requires 500 lbs. of dough, and that to produce 500 lbs. of dough, 300 lbs. of Oats, 50 lbs. of Wheat Germ, etc. are required

This screen shows the recipe required for seven cases of dough. To learn more about any of the materials required to make an NRG-A bar, select the item and click on the detail icon.

With the nutmeg selected, click on the where-used icon (⏏), which will call up the following screen:

# MRP

Lv	U	Plant	Ob...	Component number	Alt.	Item	R	Required quantity	Un	R	Resulting qty	B...
1	1	00PT		00S200		0040		2.000	LB		500.000	LB
1	1	00PT		00S210		0040		2.000	LB		500.000	LB

This screen shows that Nutmeg is used in two products—the dough for NRG-A and NRG-B bars. (You can double click on each line to view the products.) According to help.sap.com, the where-used list can be used to:

- Determine requirements for a specific material
- Select products that are affected by a change to an individual part
- Find assemblies that will be delayed if, for example, there is a delay in the delivery of a raw material
- Calculate the effect on the cost of a product if the price of a raw material rises

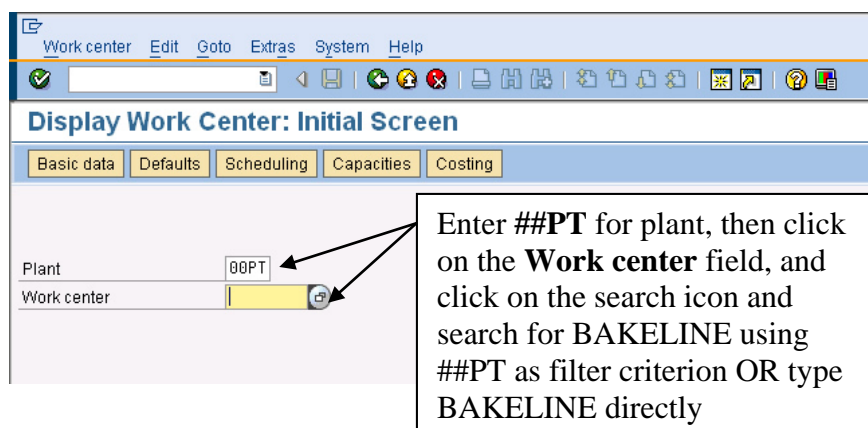

Click on the exit icon (🏠) until you return to the SAP Easy Access screen.

## Display Workcenters

Production is carried out at workcenters. In the SAP ERP system, workcenters can represent machines or groups of machines, production lines, assembly lines, employees or groups of employees.

To display the workcenters used for Fitter Snacker's snack bar production, follow the menu path:

**Logistics > Production > Master Data > Work Centers > Work Center > Display**

Work center   Edit   Goto   Extras   System   Help

**Display Work Center: Initial Screen**

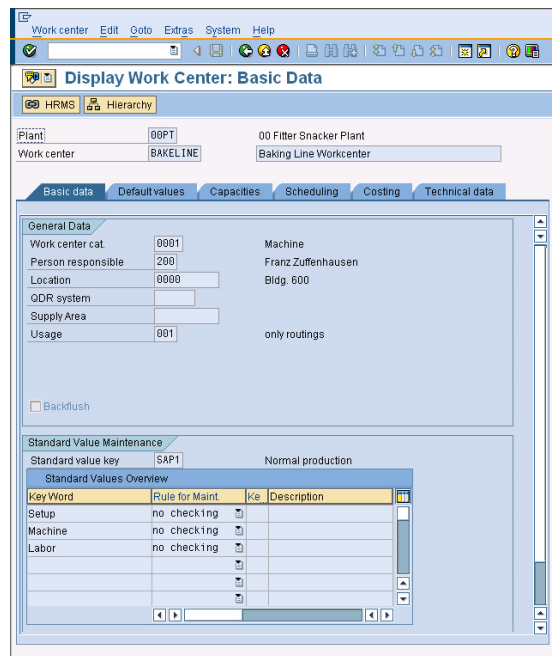

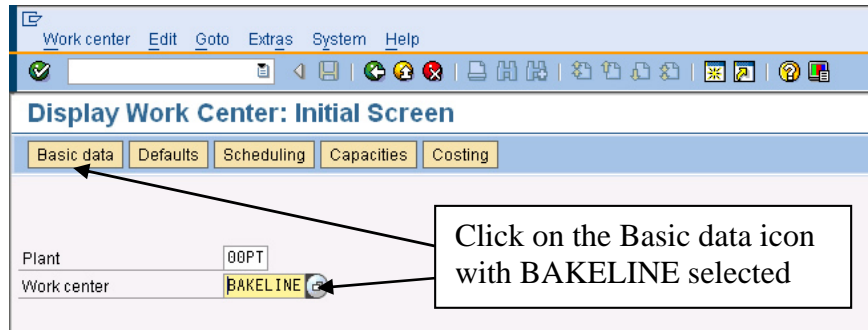

Basic data   Defaults   Scheduling   Capacities   Costing

Plant   00PT

Work center  

Enter ##PT for plant, then click on the **Work center** field, and click on the search icon and search for BAKELINE using ##PT as filter criterion OR type BAKELINE directly

# MRP

This multi-tabbed screen contains all relevant data for the workcenter. Click on the exit icon (🏠) until you return to the SAP Easy Access screen.

## Routings

Routings define the work centers that a product must visit in the production process. Routings also define the operations that must be performed at each workcenter and the components that are needed for each operation.

### 1. Create ##F100 (NRG-A bar) and ##F110 (NRG-B bar) Routings

To create a routing for the NRG-A bars, follow the menu path:

# MRP

# MRP

Click on the save icon (  ) to save the routing. You will get a message like the following:

 Routing was saved with group 00GROUP and material 00S200.

Return to the beginning of section 2 and repeat the process to create a routing for **##S210** (dough for NRG-B bars).  
All entries are the same as for **##S200** (dough for NRG-A bars).

## 3. Create Product Group

Many firms produce hundreds of products, and planning for each product individually is not feasible or desirable. What these firms do is create product groups, and then plan production for a small number of product groups and then transfer these plans to individual products based on historic percentages. While Fitter Snacker does not have a large of number products, we will use the product group process anyway.

To create a product group for Fitter Snacker, follow the menu path:

**Logistics ▷ Production ▷ SOP ▷ Product Group ▷ Create**

which will produce the following screen:

# MRP

Product groups Edit Goto Extras System Help

**Create Product Group: Initial Screen**

Product group 00 NRG Group 00 NRG-Aand NRG-B Bars

Plant 00PT

Base Unit CS

Members

☒ Materials

☐ Product groups

Enter ## NRG Group and ## NRG-A and NRG-B Bars  
Enter ##PT for Plant  
Enter CS for Base unit  
Then click on the enter icon

Product groups Edit Goto Extras System Help

**Create Product Group: Maintain Members (Materials)**

Hierarchy graphic Versions... Master data... Product grp. graphic

Product group 00 NRG GROUP 00 NRG-Aand NRG-B Bars

Plant 00PT 00 Fitter Snacker Plant

Base Unit CS

Member number	Plnt	Unit conv. Short Text	Aggr. fact.	Proportion	UoM	V M Fx
00F100	00PT		1	70		<input type="checkbox"/>
00F110	00PT		1	30		<input type="checkbox"/>

Enter ##F100 and ##F110 for member numbers  
Enter ##PT for Plnt, 1 for Aggr. fact. for both bars  
Enter 70 for the Proportion for NRG-A and 30 for the proportion for NRG-B bars

These proportions mean that whatever production is planned for the NRG group, it will be assumed that 70% of the production should be NRG-A bars and 30% should be NRG-B bars. Click on the enter icon (✓) to confirm that you have the correct products in the group:

# MRP

Product groups Edit Goto Extras System Help

**Create Product Group: Maintain Members (Materials)**

Hierarchy graphic Versions... Master data... Product grp. graphic

Product group 00 NRG GROUP 00 NRG-Aand NRG-B Bars

Plant 00PT 00 Fitter Snacker Plant

Select **## Canola** and then click on the Display Selected stock/requirements lists icon

# MRP

Click on the back icon, which will bring you back to the list of your materials. Note that there is now a check mark next to **## Canola** in the column **Already accessed**:

Already accessed									
Light	Material	Material Description	A...	Supp					
	00F100	00 NRG-A	<input type="checkbox"/>		999.9	999.9	999.9		
	00F110	00 NRG-B	<input type="checkbox"/>		999.9	999.9	999.9		
	00R300	00 Canola	<input checked="" type="checkbox"/>		999.9	999.9	999.9		
	00R310	00 Carob Chips	<input type="checkbox"/>		999.9	999.9	999.9		
	00R320	00 Cinnamon	<input type="checkbox"/>		999.9	999.9	999.9		
	00R330	00 Cloves	<input type="checkbox"/>		999.9	999.9	999.9		

This feature helps the MRP controller keep track of which materials they have already reviewed. The traffic lights also help the MRP controller focus on critical materials. The traffic light concept is used in many areas of the SAP system to help the user prioritize tasks. In our case, the materials with a red traffic light have a non-zero safety stock specified. As there have been no goods receipts for these materials, they are below their safety stock levels and, hence, the red lights.

It is possible to customize the traffic lights.

Click on the Define traffic lights icon (  ), which will produce the following:

# MRP

Define Traffic Light

Define traffic light depending on ranges of coverage

Lights

Days' supply	1st rcpt days'supply	2nd rcpt days'supply
<= 1 -	<= 0.1 -	<= 0.1 -
<= 999.9	<= 999.9	<= 999.9

Define traffic light depending on exception groups

Lights

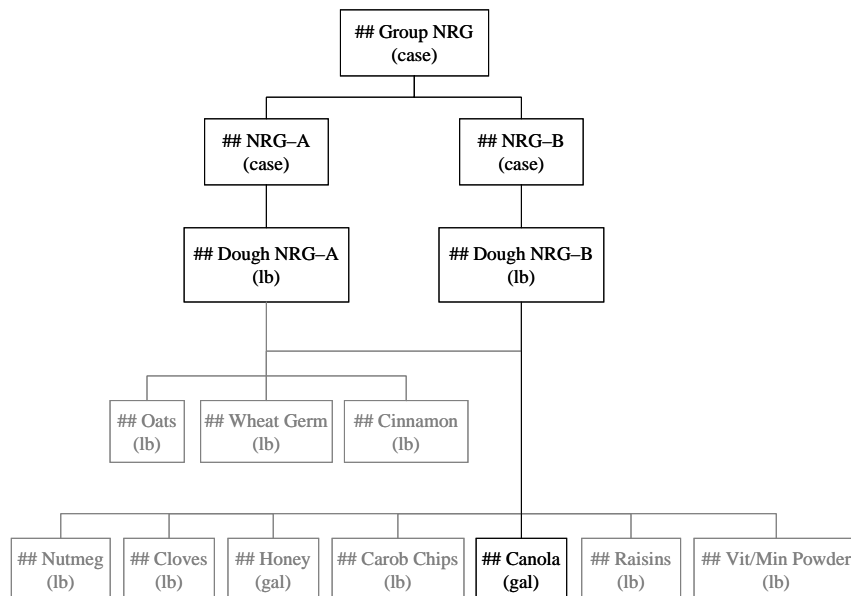

Exception Group	Red	Yellow	Green
1 New; opening date in the past	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
2 New; start date in the past	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
3 New; finish date in the past	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
4 General messages	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
5 Exception during BOM explosion	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
6 Exception during availability	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
7 Exception during rescheduling	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
8 Terminations	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

Basic Setting Exception groups

This screen shows that the SAP system provides the user with a great deal of flexibility in how to configure the traffic light system for issuing warnings as required. Click on the cancel icon (X) to close this window.

We will keep the Stock/Requirements list open so that we can easily review the results of the MRP process. We will use the following materials to evaluate the MRP process (see figure below):

- ## NRG-A
- ## NRG-B
- ## Dough NRG-A
- ## Dough NRG-B
- ## Canola

# MRP

At this point, the Stock/Requirements list for these materials is pretty boring as there is no production scheduled.

## 5. Create Sales and Operations Plan

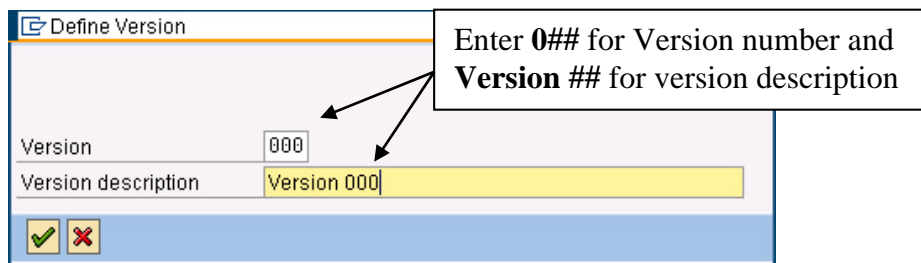

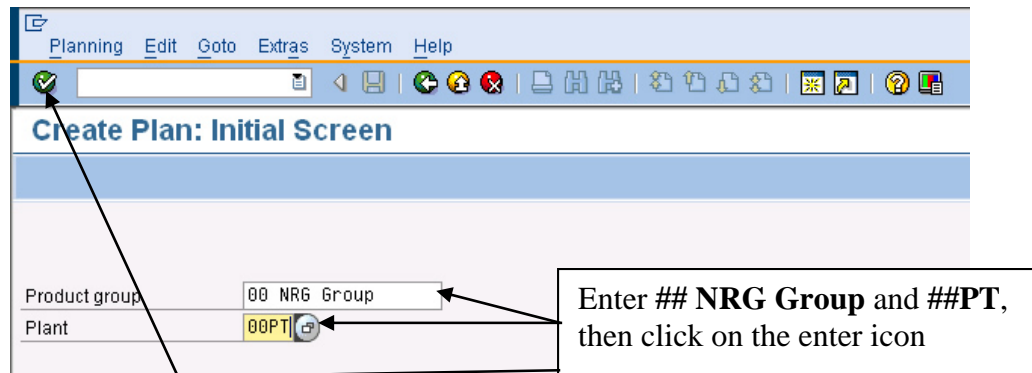

In SAP, the Sales and Operations Planning process is one way to create demand for the MRP process. In practice, Sales and Operations Planning is the process where operations and marketing agree on a demand forecast and a production plan to meet that demand. Ideally, this Sales and Operations Plan should optimize profit for the organization.

To perform Sales and Operations Planning, open a second session by following the pull-down menu path:

**System→Create session**

In this second session, follow the menu path:

**Logistics ▷Production ▷SOP ▷Planning ▷For Product Group ▷Create (MC81)**

Click on the enter icon (✓), then the following screen will appear:
